

1800 Larimer St. Dewatering for Mortenson Construction

WWE provided water sampling and reporting on the construction dewatering system for the 1800 Larimer Street hi-rise building construction site. The sampling and reporting was required by the Colorado Department of Public Health and Environment (CDPHE) for the Construction Dewatering Discharge Permit (Discharge Permit).

The Discharge Permit required sampling on a weekly basis for total suspended solids (TSS), total dissolved solids (TDS), pH, oil and grease (visual), and flow rate for two active discharge points. For two discharge points, WWE collected samples on a weekly basis, maintained a database of water quality results and prepared Discharge Monitoring Reports (DMRs) of the sample data for submittal to CDPHE each month.
