

## Confidential Coal Bed Methane Producer

In 2007, WWE developed a treatment system and discharge permit application for a confidential coal bed methane producer in southwest Colorado. The work involved several steps:

- WWE conducted an initial water quality assessment (WQA) of the receiving waters for the CDPHE Water Quality Control Division (WQCD).
- Pilot testing was performed to determine the best treatment approach to address the constituents of concern in the discharge.
- The preferred treatment system was designed and constructed. WWE performed all designs and construction-phase engineering services.
- WWE helped the client submit its discharge application to CDPHE.

The client is in compliance and engaged in full-scale CBM production.
