

Petroleum Pipeline Repair in Moffat County

In late 2011, WWE was contracted by Plains All American Pipeline (Plains) to perform wetland delineation and permitting tasks for petroleum pipeline repair activities in Moffat County. Plains had two buried pipeline river crossings that were exposed and at risk for damage by spring high flows.

WWE was on-site within 48 hours of Plains' initial contact and delivered a delineation and permitting submittal for the U.S. Army Corps of Engineers within one week. Further, WWE was able to coordinate with the Corps and eliminate further notification requirements for the project. This is a good example of how WWE's ability to respond rapidly and identify efficient permitting paths can help clients maintain challenging project schedules.
