

## Stormwater Management for Copper Mountain Resort Base Area

WWE has worked with Intrawest since the late 1990s on water quality protection strategies for development of the Copper Mountain Base Area along West Ten Mile Creek, a Gold Medal trout stream. WWE prepared a comprehensive master planning document addressing water quality as a part of the 1999 Planned Unit Development (PUD) and more recently for an amended PUD that was approved in 2008. As part of this work, WWE monitored West Ten Mile Creek for water quality and aquatic life impacts.

As a part of our water quality consulting work, WWE has reviewed plans for drainage and water quality protection measures. In addition, WWE has reviewed and commented on grading, erosion and sediment control (GESD) plans for virtually every development project at the Copper Mountain Base area since 2003. WWE has also performed design hydrology and criteria for the foundation drains of large capacity buildings at the resort.
