

Town of Palisade, Colorado, Water Storage Tank

WWE performed water rights, raw water supply, and treatment and storage planning for the Town of Palisade, Colorado. A facilities plan and economic analysis was also done by WWE that showed that the Town should consider service from another major water District. However, the water rights aspects of the supply convinced the Town to continue with their own system with major modifications.

WWE was the engineer for a \$6-million project focused on water supply, treatment and storage system planning, design and construction. The improved system serves a population of approximately 4,500 people.
